Work Experience

Upwork

June 2022 - Present

Software Consultant

- Connected remotely with multiple companies to implement software solutions unique to their specific business needs
- Coordinated with clients to develop new features for web applications using React, with a mobile first responsive design in mind.

SoraWeb Inc

April 2020 - June 2021

Software Consultant

- Front end development for website integration and production quality UI.
- Investigated and implemented performance solutions, shortening current release times

The Odin Project

January 2019 - July 2021

Contributor & Moderator

- Actively contributed to a free open source Frontend bootcamp to improve user experience and readability.
- Worked with helpers and staff to help and mentor students in Javascript and React.

Personal Ventures

Blabber

June 2022

- Full-Stack Web Application mimicking Twitter that allows users to post, like, and reply seamlessly.
- Uses Next.js as a backend, allowing for Next.auth integration with Google for account creation.
- Firestore Database to store and fetch data with Redux as a state management solution.

You Might Like

April 2022

- Full-Stack Web Application using Spotify API to recommend artists to users based on their preferences through information parsed from Spotify data.

Achievements & Interests

- Tech and VR enthusiast, fragrance collecting, competitive programming
- Ryerson Formula Racing - Design Team Member
- Ryerson Rocketry - General Team Member
